Functions

int **fAct** (int f)
Here the function will calculate the factorial. More...

int **mOdulus** (int r)
Here the function will calculate the modulus. More...

float **addition** (float n1, float n2)
Here the function will calculate the addition. More...

float **subtraction** (float n1, float n2)
Here the function will calculate the subraction. More...

float **multiplication** (float n1, float n2)
Here the function will calculate the multiplication. More...

float **division** (float n1, float n2)
Here the function will calculate the division. More...

Detailed Description

Function Documentation

◆ addition()

```
float addition ( float  n1,
                 float  n2
               )
```

Here the function will calculate the addition.

Parameters

n1

n2

Returns

float

◆ division()

```
float division ( float  n1,
                 float  n2
               )
```

Here the function will calculate the division.

Parameters

n1

n2

Returns

float

◆ fAct()

int fAct (int f)

Here the function will calculate the factorial.

Parameters

f

Returns

int

◆ mOdulus()

int mOdulus (int r)

Here the function will calculate the modulus.

Parameters

r

Returns

int

◆ multiplication()

float multiplication (float n1,
float n2
)

Here the function will calculate the multiplication.

Parameters

n1

n2

Returns

float

◆ subtraction()

```
float subtraction ( float  n1,
                    float  n2
                  )
```

Here the function will calculate the subraction.

Parameters

n1

n2

Returns

float
